

Armory Track

Armory Track is a tool that allows Property Officers (such as Armorer) to issue assets using **Radio Frequency Identifiers**. Now, your assets, weapons and/or any other items in your armory (night vision goggles, flashlights, scopes, etc.) can be checked out and returned using **RFID** Technology, reducing your overall labor or man-hours, as well automating your entire inventory.

How does it work

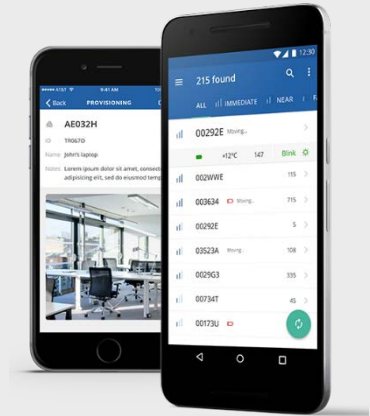

When the assets in your armory have been outfitted with an RFID tag, we use these tags to identify assets in your armory down to the serial number level, and track those assets moving in and out of the armory or point of issuance.

The tags on your assets respond to the hardware in your point-of-issuance or armory allowing **Armory Track** to register tag reads and transitions of weapons leaving and returning to the armory.

Key Features

- Easy to Use
- Software is Cell Phone Compatible
- Increased Asset Accountability
- Reduced Labor Tasks
- Accuracy in Distribution/Sales
- Real-Time Visibility

Armory Track is currently being used by the US Air Force at Travis Air Force Base.

U.S. AIR FORCE
