

## Armory Track

---

**Armory Track** is a tool to allow Property Officers such as Armors to issue assets using **Radio Frequency Identifiers**.

Now, your assets, weapons and/or any other items in your Armory (night vision goggles, flashlights, scopes, etc) can be checked out and returned

using **RFID** Technology reducing your overall labor or man-hours as well as allowing your entire inventory to be automated.

## How does it work

---

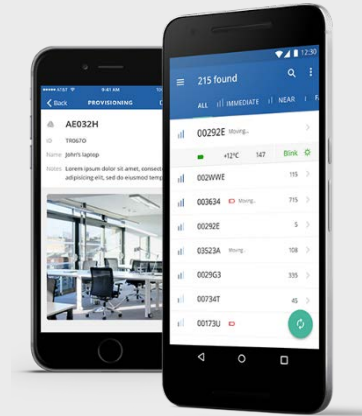

When the assets in your armory have been outfitted with an RFID tag. We can use these tags to identify assets in your armory down to the serial number level and track those assets moving in and out of the armory or point of issuance.

The Tags on your assets respond to the hardware in your point of issuance or armory allowing Armory Track to register tag reads and transitions of weapons leaving and returning to the armory.

# Key Features

- Ease of Use
- Increased Asset Accountability
- Reduced Labor Tasks
- Accuracy in distribution/sales
- Real-Time Visibility
- Improved Customer Service

Armory Track is currently being used by the US Air Force at Travis Air Force Base.

**U.S. AIR FORCE**
