

Measure-IT™

What is Measure-IT™?

Measure-IT™ is a software developed to automate the data collection and reporting of body and apparel measurements. The software allows the user to record accurate measurements of garments and people when paired with 3-D body scanners or a *Bluetooth enabled* measuring device.

Measure Apparel

- **Accuracy** – Measurements go directly into the Measure-IT database that are accurate to within 1/10th of an inch.
- **Visibility** – All results can be viewed by vendors and customers, reducing shipping and receiving time.
- **Accountability** – Measure-IT addresses ISO 9000 guidelines for measuring, tracking and reporting quality.

Bluetooth Measuring Device

Our Bluetooth Measuring Device is a solution is paired with **Measure-IT™** application. It allows users to take extremely accurate measurements in a snap, then wirelessly transmit that information to a PC or tablet to create in fully digital process!

Measure Finished Items

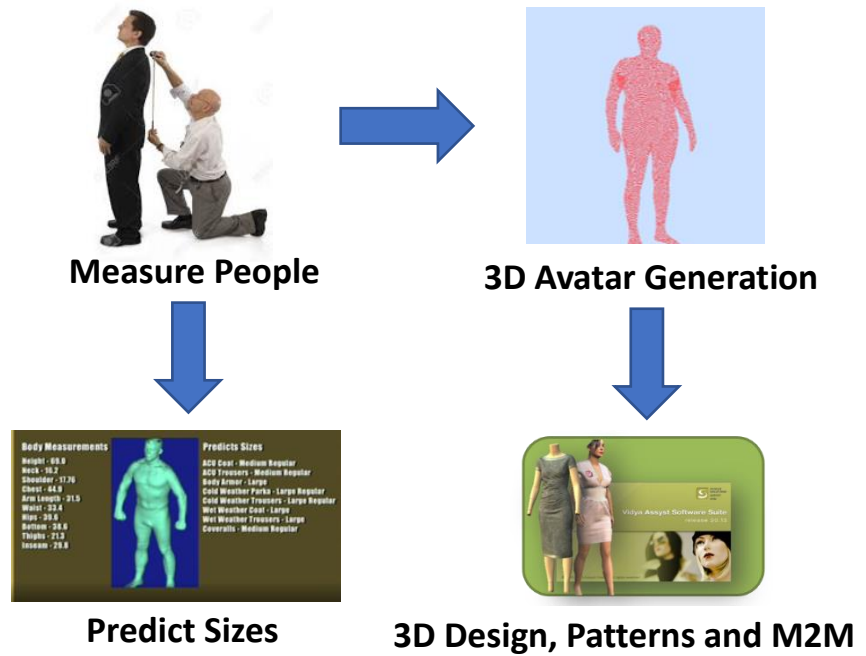

Turn-in, Size Reclassification

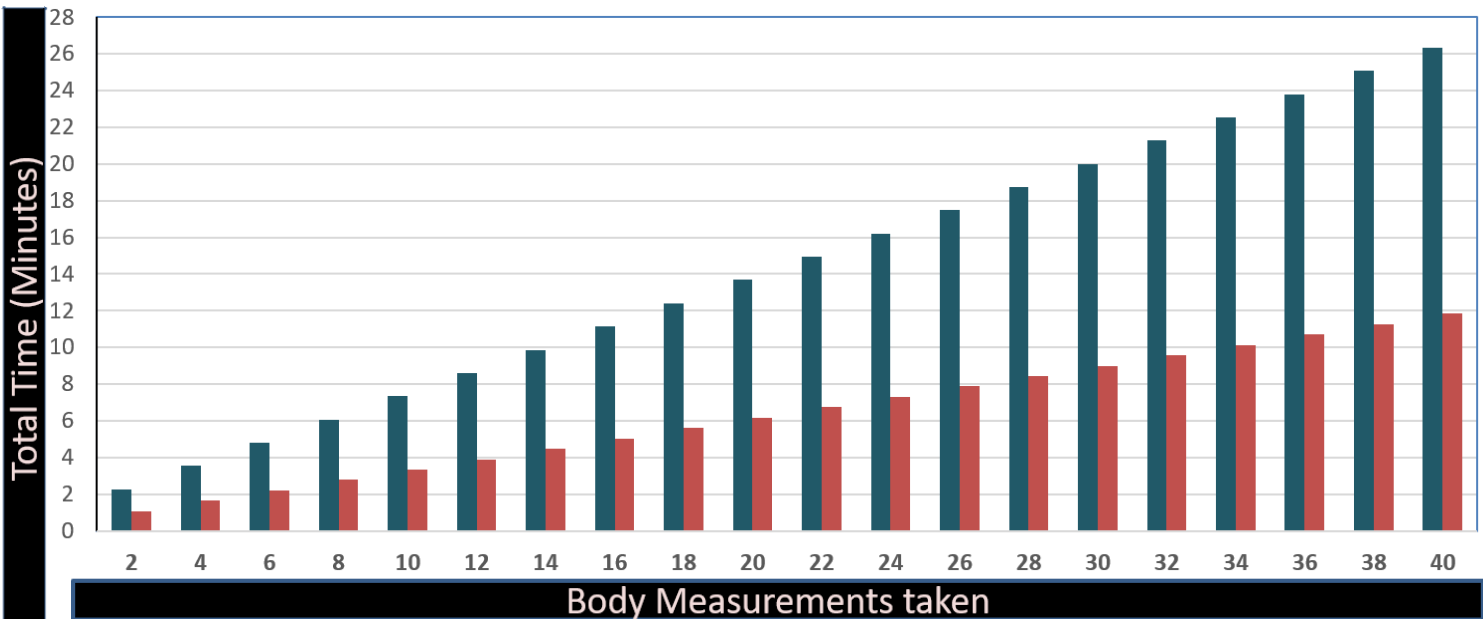

Measure-IT™

Measure People

- **Accuracy** – Measurements go directly into the Measure-IT™ database that are accurate to within 1/10th of an inch.
- **Visibility** – 3D Avatars are generated as visual validation.
- **Accountability** – The single source of data eliminates data entry errors.

Time Comparisons (Manual vs Measure-IT™)

The graph above shows the comparison in time it takes for body measurements between doing it manually and using Measure-IT. The graph shows that Measure-IT™ takes 55% less of the time and is still 100% accurate.
