

## WHAT IS THE TEMPERATURE MONITORING SYSTEM?

Using Low Energy Bluetooth (LEB) technology, AdvanTech has created a Real-Time Temperature Monitoring System for compliance with food and drug safety regulations. While some temperature monitoring systems can be costly, LEB tags are low cost and are easily mounted inside of your supply chain units. A read point controller is connected to the local network and receives signals from the readers. Notifications are sent out immediately in real-time via text or email to ensure 100% compliance with safety regulations.

## BENEFITS AND KEY FEATURES

- ✓ Low cost investment that enables stronger compliance with food and drug safety regulations
- ✓ Tracking is done in real-time
- ✓ No manual data entry required
- ✓ Adaptable for over the road transport
- ✓ Can check status on your smartphone
- ✓ On demand compliance reporting (HACCP) from multiple sites
- ✓ Allows for multiple devices within large units
